

Heat Dissipating Arrangement for Portable Computer

Abstract of the Disclosure

The invention discloses a sectional arrangement of heat dissipating plates for notebook computer. The arrangement consists of a plurality of heat dissipating plates each having at least two holding means. Each holding means has a Y-shaped member
5 having a stem and a pair of arms, and an engaging opening. In assembly, the pairs of arms of all holding means are able to be pressed inwardly through each corresponding engaging opening until each heat dissipating plate is engaged by its neighboring heat dissipating plate.
